SUMMARY OF MEETING:

The ASTM changing table task group met to discuss changes to the standard. The primary purpose of the meeting was to discussing modifying the terminology to describe the subject products from “changing tables and other changing products such as contoured changing pads and add-on changing units that are sold separately” to “changing products.” Modifications needed in the standard in the areas of instructions, barriers, and stability were discussed. The task group agreed that the proposed language was ready to present to the subcommittee as a whole in late September.
